MELBOURNE

PublicLecture

What's with all these earthquakes?

Professor Mike Sandiford, Professor of Geosciences, University of Melbourne

Professor Kevin Furlong, Professor of Geosciences, Pennsylvania State University

Professor Phil Cummins, Centre for Natural Hazards, ANU

Mr Gary Gibson, Senior Research Seismologist, University of Melbourne

Assoc Prof Antoinette Tordesillas, Mathematics & Statistics, University of Melbourne

Wednesday, 13 April

7.00—8.00 pm

Carillo Gantner Theatre

Sidney Myer Asia Centre

The University of Melbourne

Melway Map 871, I 14

Admission is free.

Since 2001 we have experienced three of the seven biggest earthquakes ever recorded with eleven earthquakes claiming more than 1,000 fatalities. In total, over 700,000 people have died as a result of this extraordinary sequence of events. With many eminent earthquake seismologists predicting we will soon experience an earthquake that claims more than 1 million lives, this public seminar will discuss the background to, and lessons to be learned from, this devastating sequence of earthquakes and what can be done about it.

The seminar will be introduced with short presentations by international experts in earthquake seismology, followed by a moderated panel discussion.
